

How many low-power mode products do you have?

In checking the boxes, keep in mind that not all products within a product type have a low-power mode; if they are on this list, some do. If yours does not have a low-power mode, don't check the box. Anything that is programmable or has a remote (meaning that it is not completely off unless it is unplugged), as well as anything with an indicator light, probably has a low-power mode.
